

The Network

The 3N Centre of experts, active across the country since 2006, was granted the legal status of a registered association in January 2011. The 3N e. V. now only pursues charitable objectives.

It is the communications platform for the field of renewable resources and supports network building in Lower Saxony (Niedersachsen).

The founding members are:

Competent - Independent - Innovative

Information

- Central information point for Lower Saxony, events, seminars and trainings
- Info portal: www.3-n.info

Innovation

- Knowledge transfer and cooperation
- Technology transfer
- Agency for competent partners
- Network building

Financial support

- Informations on subsidies
- Expert statements

Projects

- Project management
- Initiation, acquisition and coordination of national and EU projects

Publicity work

- Exhibitions, trade fair representations
- Actions

Further information, projects and references can be found at: www.3-n.info.

The 3N Centre of Experts offers

you informations along the whole of the value creation chain, from cultivation to processing, technical procedures to marketing.

Objectives and Implementation

As a centre of experts, 3N promotes:

- the use of renewable resources,
- the development and use of sustainable products, production processes and services,
- cooperation between manufacturers and research centres,
- the interests of Lower Saxony through representation at national and international levels.

The 3N Centre of Experts is engaged

in regional, national and european projects and initiatives, e.g.:

- in IEE Agri For Energy II and in various INTERREG projects,
- in the Climate Centre,
- in the Lower Saxony Wood Marketing Initiative.

The Climate Centre in Werlte

- Forum for company presentations
- Reference displays on the use of ecological energy technology, building and insulation materials
- Exhibition area: bioenergy, building materials, new raw materials.

Initiator and supporting organisation:

Renewable resources are agricultural and forestry products which can be used as materials or to produce energy. They are continually renewable and CO₂ neutral. Renewable resources make an important contribution to climate protection and sustainable production.

The increasing importance of bioenergy, the growing use of wood as building material and the use of ecological construction and insulation materials, innovative raw materials, natural binding agents, paints and varnishes, biodegradable packaging as well as special plants for pharmaceutical products - all these offer new market opportunities for agriculture, handcrafts and processing industries.

Biopolymers, Fibre composites

Bioenergies

Solid Fuels

Timber construction materials

Building and insulation; exhibition area, regenerative energy technology
